Arrangements with asset manager

This document contains our disclosure as requested by section 5:87d of the Dutch Financial Supervision Act (Wet op het financieel toezicht). The scope of this disclosure is the proprietary equity portfolio managed on behalf of NN's own assets.

According to NN's investment strategy, the relevant companies within NN group manage their investment portfolios within a framework of investment-related policies and standards which reflect their risk appetite to make sure all risk-related items are taken into account.

Within NN, the liability-driven portfolios are not managed on a total return basis as NN is convinced that no benchmark can reflect the liability cash flows and the different investment constraints linked to it. Therefore liability-driven portfolios are managed on a cash flow basis. For portfolios not backing liabilities, an asset-driven approach is followed with more focus on total returns.

Within the overall investment process, NN takes environmental, social and governance (ESG) factors into account when making investment-related decisions as NN is convinced that this creates long-term value not only for NN as a company but also for society at large.

NN has delegated the management of equity investments to the asset manager Goldman Sachs Asset Management (GSAM) through asset management agreements. According to these agreements, GSAM manages the investments in line with NN's investment strategy.

In line with the mandate agreements, GSAM manages the equity portfolio of NN to meet its long-term investment objective of optimising economic returns. In doing so, GSAM is obliged to invest according to the Responsible Investment Framework policy, which addresses the consideration of ESG factors in the investment-decision making and active ownership activities (voting and engagement).

On a periodic basis, NN assesses the investment results of the GSAM managed portfolios applying predetermined evaluation criteria. The management fees in relation to managed equity portfolios are fixed-fee arrangements. As capital preservation is important, a disciplined and conservative value approach is used. The long-term investment horizon implies relatively low turnover and transaction costs. As sizeable stakes in companies are owned, the aim is to be a long-term shareholder and a value-adding, engaged partner.

GSAM provides information on portfolio turnover to NN on a regular basis, which enables NN to monitor trade-related costs and detect unusual trade activity.

As part of the agreement between NN and GSAM, we have entered into a ten-year strategic partnership under which GSAM provides asset management services to NN Group, effective as from the first quarter of 2022.
